Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

In independent claims 1, 8, 15 and 20 directed towards a non-volatile memory system including a circuit for prevention of unintentional writing to the memory, the following features taken in combination with the remaining limitations in the independent claims are not found in and/or are not obvious in view of the prior art of record.

2. **Claim 1**, *"a control signal detecting circuit that detects a change in said control signal and outputs a second reset signal in response thereto; wherein a data input or output operation to said memory is prohibited in response to either said first reset signal or said second reset signal"*.

3. **Claim 8**, *"a standby control signal detecting circuit that detects a change in said standby control signal and outputs an operation prohibition signal to said mode control register to prevent a data input or output operation to said memory when said low-voltage detection circuit is turned off at the time of said drop in power supply voltage"*.

4. **Claim 15**, *"a memory operation mode controller for controlling an operational mode of said memory, said memory operation mode controller being resettable to a default state in response to receipt of a reset signal"*.

5. **Claim 20**, *"a writing prevention circuit that prevents said mode control register from enabling a writing operation to said non-volatile memory when a drop in power supply voltage occurs while said low-voltage detection circuit is turned off"*.

6. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".
